

Levi North Start Hotel building site

A complete expression with Tonality facade cladding

Located on a hill among trees, the colour selection for the hotel was clear right from the start; earth colours.

'We chose the combination of natural stone and Tonality.

Having completed the project, it is now evident that this combination is exactly right.

The building has already been taken into use and as shown in the pictures, the hotel's location is characterised as being very cold, snowy and icy.

Tonality was therefore the obvious choice due to its low water absorption and the risk of frost damage is non-existent.

## When shape is important

Straight, clean facade lines, tight styling and detailing; Tonality is the obvious choice. Made from the finest raw materials, Tonality with its wide variety of surfaces and colours offers ample possibilities for creating an architectural expression that matches your facade wishes and requirements to perfection.

Tonality mixes perfectly with glass facades as well as with other materials. Exciting contrasts and colour combinations make the building stand out and match the architecture and the desired ambiance.

Ari Mäki-Marttunen, the architect behind the new Lapland hotel, saw interesting and special opportunities in the combination of natural stone and Tonality. It was important to use a wide colour palette, and in addition there was a need for great flexibility in terms of cutting / horizontal cutting.

The umbra grey Tonality facade tiles work really well with the other materials used in the construction such as natural stone and glass.

3000 m2 Tonality tiles were used for the construction which

were fitted by means of the user-friendly ADS system. Moreover, very little waste was produced during construction as the tiles were adjusted to the format and design of the construction.
